

SIMATS ENGINEERING

Saveetha Institute of Medical and Technical Sciences
Chennai- 602105

Student Name: Nibras M

Reg. No.: 1965260001

Course Code: CSA0704

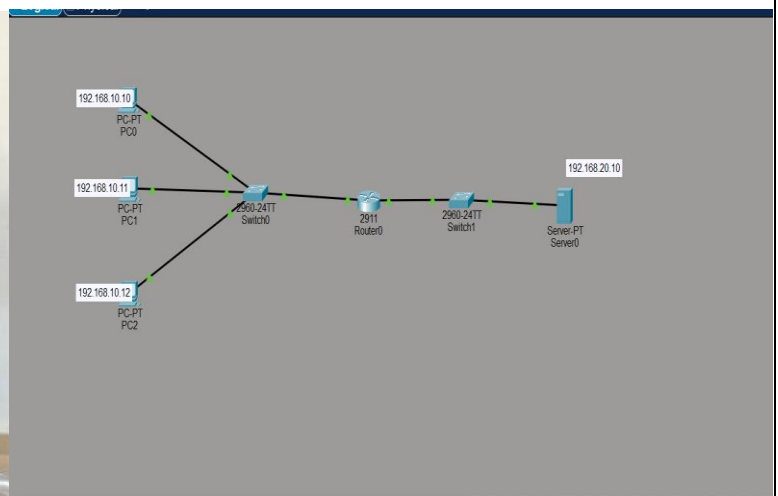

Slot: A

Course Name: COMPUTER NETWORKS

Course Faculty: Dr.JAI SHARMA

Project Title : Atm to bank server communication simulation

Module Photographs:

Project Description:

PYTHON MODULE :

My role in this project was to design and configure the network topology using Cisco Packet Tracer. I created the required network structure by connecting routers, switches, and end devices according to the project requirements. I configured IP addresses, subnetting, routing, and switching parameters to enable proper communication between different devices and network segments. I also configured the necessary interfaces and verified connectivity using commands such as ping and traceroute. During the implementation, I helped identify and troubleshoot configuration and connectivity issues in the network. I tested the complete topology to ensure that data could be transmitted successfully between the connected devices. My contribution helped in developing a stable, organized, and reliable network infrastructure for the project.
